

Configure software and website

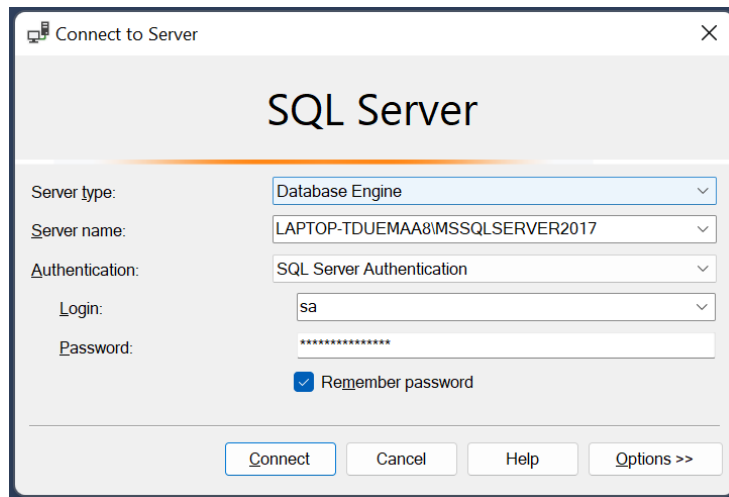

Packages include:

- README.pdf
- PlayerPlatformDB.sql
- Folder "PlayerPlatformWebsite"

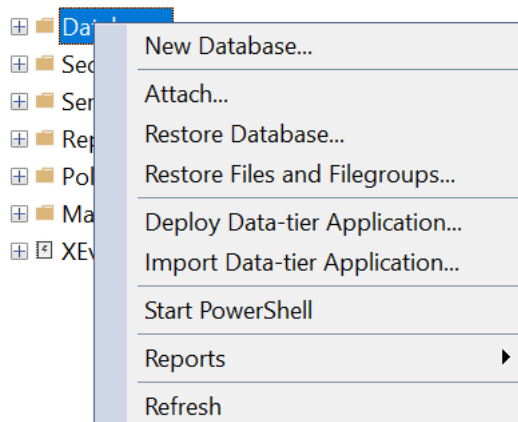

Tools:

- Visual Studio
- Microsoft SQL Server Management Studio (SSMS)

1. Run Microsoft SQL Server Management Studio, connect to server.

2. Create new database called "PlayerPlatformDB".

3. Right click file "PlayerPlatformDB.sql", Open with Notepad, Copy everything from this file.

4. In Microsoft SQL Server Management Studio. Then click 

5. Paste the code from the file. Then click 

6. Open "PlayerPlatformWebsite.sln" in Folder PlayerPlatformWebsite.

7. Open 

8. In <connectionStrings>, change the value of "Data Source", "User ID" and "password" to your local server

```
<connectionStrings>
  <add name="PPDB" connectionString="Data Source=LAPTOP-TDUEMAA8\MSSQLSERVER2017;Initial Catalog=PlayerPlatformDB;User ID=sa;password=12345;" />
</connectionStrings>
```

Use the information in step 1.

Server name:	<input type="text" value="LAPTOP-TDUEMAA8\MSSQLSERVER2017"/>
Authentication:	<input type="text" value="SQL Server Authentication"/>
Login:	<input type="text" value="sa"/>
Password:	<input type="password" value="*****"/>

9. Now can run the website. Then click 

10. The demo's username is demo, password is 123

The administrator's username is admin01, password is admin123

Feature of Website

- User registration
- User login
 1. Allow users to change their passwords
- Public chat room in real-time
- User Profile
 1. Allow user to modify password
 2. Allow user to modify Email address
